5. Tweets Automator — 18, 24, 36 | 48, 74,

Create a tool that automates tweets. In this tool, the user can write some tweets in advance, and the tool will post them on the set schedule. The user has the option of setting the program for posting these tweets as well. You'll have to use Twitter API for this project, and with the help of some other APIs, you can customize the tweets and automate it completely. This is a Django project that is suitable for beginners to intermediate level, yet with the increase in digital marketing, especially social media marketing, this will be a great Django project for resume.

6. Dictionary Application — 105, 5, 8, 22

This is one of the interesting Django project ideas. You can use a variety of APIs from the internet and create a web app that acts as a dictionary. The user would enter a word, and your app will show its meaning. You can enhance the capability of your web app by adding antonyms and synonyms to the results.

7. Notes Application — 51, 80, 63

You will have to create an interface that allows the user to create a new note and access the stored notes. Notes applications are quite simple to make, and it wouldn't take you much time to finish this project. You can make the app more interesting by adding multiple features such as adding images or having the option of customizing the notes later on. This simple project will test your knowledge of Django and its capabilities considerably.

8. Django Blog — 2 |5 200 6, 61, 53

Blogs are spread everywhere on the internet. In this project, you'll create a blog, which enables people to read your articles, and allows the team members to add more blogs to the site.
You'll have to create a unique and simple interface that makes the blog accessible. To make your blog more interactive, you can add a comment section as well where people add their comments on the blogs they read. You'll need to develop a theme for the blog to make sure it looks seamless.
